

LIT Fast-Acting Technology

DripCees Gummies' Fast-Acting Delivery System

The Clear's DripCees gummies feature **Lipid In-vivo Transport (LIT)**, a unique delivery system engineered to improve how your body absorbs cannabinoids.

LIT is designed to help cannabinoids bypass the liver and avoid first-pass metabolism. In doing so, the goal is to increase the absorption rate and, as a result, increase the bioavailability, or the ability of cannabinoids to be absorbed and used by the body. Ready to get LIT?

In Latin, 'in-vivo' means "within the living" referring to the route where your body's natural transportation system processes our fast-acting mixture, dissolves cannabinoids, and delivers it, via a lymphatic transport system, to your bloodstream to take effect.
